

FULLILL® PLUS

FEED ADDITIVE

PACKAGING AND CODES

Bags, net weight 40 pounds
Code: Nutra Blend C10066A2

Available from:
Nutra Blend, LLC,
Neosho, MO 64850
800-657-5657

Nutra Blend West,
Madera, CA 93637 / 503-982-9545
Hubbard, OR 97032 / 559-661-6161

Nutra Blend East,
North Troy, VT 05859
800-945-4474

PMI develops innovative combinations of animal feed additives that optimize performance in poultry, swine, dairy and beef cattle by supporting nutrient utilization and gut health. Working with feed nutritionists, manufacturers, veterinarians and producers, PMI products harness the interactions between feed additives to deliver value, efficacy and strong results. Through a comprehensive innovation approach, across component verticals, species, and geographies, PMI leverages the most advanced ingredients and technologies to develop products that perform.

- ▲ Prebiotic derived from the cell wall of a single source of food-grade *Saccharomyces cerevisiae*, combined with a microbial blend of *Bacillus subtilis* and *Bacillus licheniformis*
- ▲ Excellent source of prebiotic polysaccharides, beta glucans and probiotics to support immuno-competence and performance in poultry

Nutritional programs are designed to optimize animal performance and to optimize production efficiency. Inclusion of functional ingredients such as direct-fed microbials, plant extracts, essential oils and antibiotic growth promoters are all directed at helping ensure optimal gut integrity. Strategies that combine these tools are often needed to ensure success.

High gut integrity results in longer villi and thinner intestinal membranes. This provides for greater surface area for digestion and nutrient absorption. High gut integrity also requires less energy expenditure for maintenance; more nutrients are available for production parameters.

Fulfill® PLUS consists of prebiotic polysaccharides obtained from food grade yeast extract, providing glucans, mannans, quitines and galactans PLUS a probiotic blend. These functional components support immuno-competence and gut integrity for overall animal performance.

Fulfill® PLUS is from a human food grade yeast extract produced under strict quality control measures with routine analyses and with full traceability. This ensures a consistent and high quality product minimizing any variation in glucan and mannan contents. A typical analysis for Fulfill® PLUS is 20-26% beta-glucans, 20-26% mannans and a total microbial count of 300 billion CFU/lb.

FEATURES	BENEFITS
Pellet and extrusion stable	Flexible manufacturing
Feed additive	No withdrawal period required
Supports gut integrity which may result in optimal sized villi and gastro-intestinal membranes	Optimal animal performance
Single human food grade fermentation site with regular analyses	Stable and consistent source of the yeast cell wall material
High quality control and quality assurance program and procedures in place	Product quality is critical to ensuring consistent and repeatable animal performance results

FULFILL® PLUS FEED ADDITIVE

RECOMMENDED INCLUSION LEVEL

Inclusion rate lb./ton feed

Production Phase	Poultry	Swine
Starter	1.5 - 2	2
Grower	0.5 - 1	1
Finisher	0.5 - 1	0.5
Gestation		1
Lactation		1
