

ADDRESS GUT CHALLENGES WITH ENTERID™ FEED ADDITIVE

Enterid™ feed additive helps post-weaned pigs by addressing intestinal challenges. The multiple components in Enterid™ feed additive support an optimal microbial population to support the pig's developing gut environment and immune system.

3 THINGS TO KNOW ABOUT ENTERID™ FEED ADDITIVE

- ▲ Risk management tool to maintain producers' nutritional programs around intestinal challenges
- ▲ Supports a balanced gut microbiome
- ▲ Supports optimal gut health and integrity

Success happens when you make fractional changes that assist in driving positive results. We deliver innovation to help you expand your animals' performance potential.

Support the most vulnerable members of your herd.

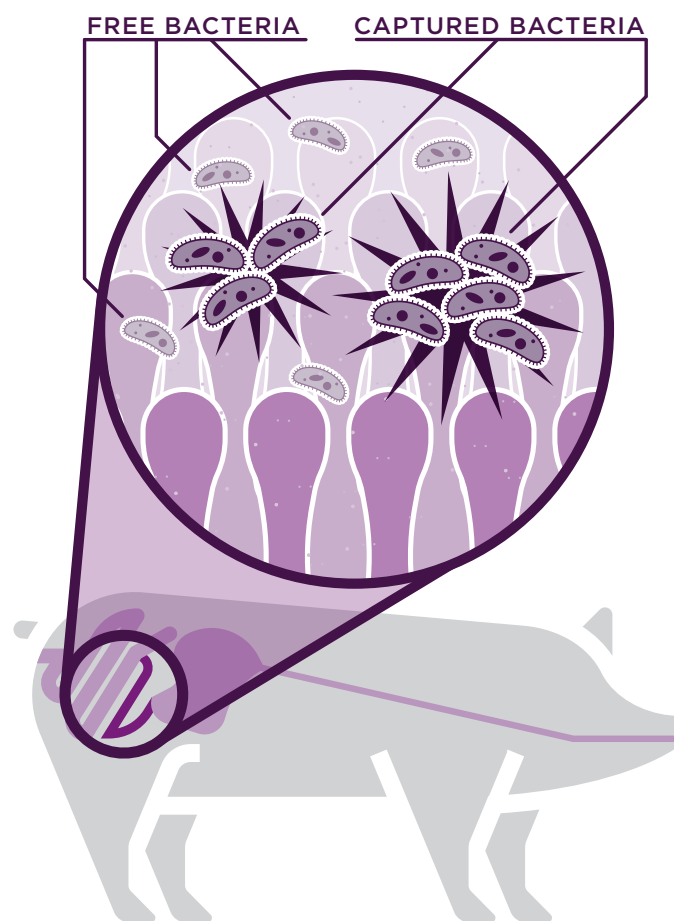

When a pig is weaned, the lactogenic immune protection from sow's milk declines before the pig's immune system fully matures. In this period of immune deficiency, pigs face stressors such as transportation, co-mingling and diet transitions. These stressors that are encountered during this period of immune deficiency can result in young pigs being vulnerable to illness.

Support the gut to expand what's possible

The multiple components in Enterid™ feed additive work together in the gut to support the young pig's immunity. These ingredients interact to help maintain optimal gut integrity during intestinal challenges. Together, these ingredients deliver a powerful benefit.

Enterid™ feed additive delivers the following modes of action¹:

- **Captures** bacteria to support optimal gut microbial profile
- Helps **Contain** bacteria to support optimal environmental microbial populations
- Supports optimal gut health during intestinal challenges
